

Module 1: Linux System

Content of course

- 
- A cartoon illustration of Tux, the Linux penguin mascot. Tux is a black and white penguin with a large orange beak and large orange feet. He is standing and facing forward. The background is a light blue gradient with some white stars.
1. Download Syllabus.
 2. Lab setup.
 3. Download and Install Virtual Machine.
 4. Creating First Virtual Machine.
 5. Linux Installation
 6. Command syntax for Linux.
 7. Files and directory permissions and ownership.
 8. Getting help.
 9. Tab and up arrows.
 10. Pipes (|).
 11. Adding text to files.
 12. File display commands.
 13. File maintenance commands.
 14. Filter and text processing commands (wc,grep,egrep,awk,cat etc)
 15. Combining and splitting files.
 16. Linux's windows commands.
 17. Linux file editor (VI).
 18. User account management.
 19. Switch Users and shell commands.
 20. System utility commands.
 21. Process and Jobs.
 22. Process and jobs.
 23. Process management.
 24. System Monitoring commands.
 25. Log monitoring.
 26. System maintenance commands.
 27. Changing hostnames.
 28. Finding System information.
 29. Getting system architecture information.
 30. Terminal commands.
 31. Terminal Ctrl Keys.
 32. Recovering root password.

Oracle Virtual Box Download and installation

- Browse on Oracle Virtual Box then download.

- Install it.
- Create First Virtual Machine.

Linux download and installation.

[CentOS-7-x86_64-DVD-1908.iso](#) Download

Which be Anaconda is an installation program used by CentOS.

Software selection is “Server with GUI”

- Software config
Kdump is a kernel crash dumping mechanism designed for saving the system's memory contents for later analysis. It is especially helpful for the purposes of debugging when you want to discover the cause of a crash.
- Linux CentOS installation.
[CentOS-8-x86_64-1905-dvd1.iso](#) Download
Security policy not fall under the localization tab in Linux CentOS 8
- User settings and configuration.

Arrange the following steps for removing the ISO image in its correct order. Select the answers from the drop-down list in the correct order, first to last (top to bottom).

[Answer instructions](#)

Click the right control key	✓
Click devices	✓
Click optical devices	✓
Click remove disk from virtual drive	✓

✓ Correct.

On successful completion of this module you will be able to:

- Explain the function of Oracle Virtual Box.

- Define the different system tabs in Linux CentOS 8.
- Discuss the process of creating a virtual machine.
- Describe the role of the Anaconda installation program in CentOS 8.

Module Summary

In this module you learned:

- The Oracle Virtual Box is a platform that allows users to run multiple operating systems on the same hardware.
- A file system is a logical collection of files on a partition or disk. A partition is a container for information and can span across the hard drive if desired.
- The right control key is used to release the mouse from the installation screen on Windows.
- The installation program that CentOS uses is known as Anaconda.
- VDI is the recommended hard disk file type to use when creating your first Oracle virtual machine.
- The options that fall under the system tab in Linux CentOS 8 are:
 1. KDUMP option
 2. Security Policy option
 3. Network and Host Management option
 4. Installation Destination option
